Guidance

- CDPH conducted a conference call for California healthcare facilities on July 7, 2020, at 0800 hours, to provide updates on COVID-19.
- The California Department of Public Health announced on July 7, 2020, the most recent statistics on COVID-19. California's positivity rate – a key indicator of community spread – is trending upward in the 14-day average. Hospitalization rates are also trending upward in the 14-day average. California has 277,774 confirmed cases to date. Numbers may not represent true day-over-day change as reporting of test results can be delayed. There have been 4,896,370 tests conducted in California. As testing capacity continues to increase across the state, an increase in the number of positive cases has been expected – increasing the importance of positivity rates to find signs of community spread. There have been 6,448 COVID-19 deaths since the start of the pandemic.
- CDPH is drafting the following guidance:
 - Infection Mitigation in Behavioral Health Facilities
- The CDC Health Alert Network (HAN) advised consumers on July 5, 2020, not to use any hand sanitizer manufactured by "Eskbiochem SA de CV" in Mexico, due to the potential presence of methanol, a "toxic alcohol", as an active ingredient, which can cause blindness and/or death when absorbed through the skin or when swallowed.
